## Safety

### • Application of pinch-less panels

Pinch-less panels are used at the joints between panels, so there are no fears of getting a finger caught.

### • Two-beam photoelectric switch

The photoelectric switches are installed at two heights of 150 mm and 500 mm as standard equipment.

In addition, the load detection is also included as standard equipment for added safety to automatically reverse and raise the panel if it touches an obstacle when closing.
